

## **PROJECT**

Title: **ENHANCING TREATMENT REGIME COMPLETION THROUGH INNOVATIVE NURSING INTERVENTIONS**

### **Problem Statement:**

Low OPD attendance

Treatment non adherence

### **Objectives:**

To increase treatment regime completion rates among clients with low OPD attendance.

To improve health outcomes by ensuring clients adhere to prescribed treatment plans.

To reduce healthcare costs associated with incomplete treatment regimens and subsequent complications.

### **Proposed Intervention:**

To conduct home visits

Providing personalized care and support

Contact tracing methods

Teamwork

Mobile clinics

### **Expected Outcomes:**

- Increased completion rates of treatment regimens among clients with historically low OPD attendance.
- Improved health outcomes, including better management of chronic conditions and reduced incidence of complications.

- Enhanced patient satisfaction and trust in the healthcare system through personalized care delivery.
- Cost savings associated with reduced hospitalizations and emergency interventions due to improved treatment adherence.
- Increased in OPD per capita as evidenced by data from DHIMS 2 and a reduction in medication non adherence
